

## **INTALIO ANNOUNCES EARLY AVAILABILITY OF FIRST STANDARD BASED BUSINESS PROCESS MANAGEMENT SYSTEM (BPMS)**

*Intalio n3 BPMS Lets Global 2,500 Firms Implement Complex Business Processes*

**SAN MATEO, CA - March 27, 2001** - Intalio, Inc., the Business Process Management Company[™], today announced the early availability of the Intalio n3 Business Process Management System (BPMS) through its Early Access Program (EAP). The Intalio n3 BPMS allows Global 2,500 firms to manage the entire lifecycle of business processes within the enterprise and among trading partners. Applications to the Intalio n3 EAP are now being accepted at [www.intalio.com/eap](http://www.intalio.com/eap).

The Intalio n3 BPMS consists of five components that, together, enable the design, deployment, execution, maintenance, and optimization of business processes. The heart of this system is Intalio n3 Server, a process virtual machine that supports the execution of business processes conforming to the Business Process Modeling Language (BPML), Draft 0.4, which was recently published by the Business Process Management Initiative (BPMI.org). Intalio n3 Server is capable of executing collaborative and transactional business processes that span multiple applications and business partners, behind the firewall and over the Internet.

Intalio n3 enables firms to leverage their existing IT infrastructure and incorporate best-practice business processes engrained within ERP, CRM, and SCM systems. Firms will now be able to implement value-added processes capable of reflecting the level of agility required in today's economy, including build-to-order manufacturing, collaborative value-chain execution, as well as end-to-end provisioning.

"The goal of this program is to identify the most diversified and demanding sets of process management issues faced today by Global 2,500 firms, and to ensure that our solution is well suited to successfully address this wide variety of needs," said Ismael Ghalimi, CEO of Intalio, Inc. "We are thrilled to pioneer this space with the first standards-based Business Process Management System."

Participants in the EAP will work closely with Intalio personnel to implement the Intalio n3 Server in their existing IT environment, typically within a corporate department or business unit. Interested companies may apply for the Intalio n3 Early Access Program now by visiting [www.intalio.com/eap](http://www.intalio.com/eap).

### **About Intalio**

Intalio, the Business Process Management Company and creator of the Business Process Management Initiative (BPMI.org), is a visionary eBusiness infrastructure software vendor developing Intalio n3, the first standard-based Business Process Management System (BPMS). The Intalio n3 BPMS empowers companies of all sizes to develop and operate value-added processes that span multiple applications and business partners, behind the firewall and over the Internet. Founded in July 1999 by seasoned entrepreneurs and recognized innovators in enterprise software development, Intalio is a privately held, venture-backed company located in San Mateo, CA. Intalio can be reached at +1 (650) 345-2777, [info@intalio.com](mailto:info@intalio.com), or [www.intalio.com](http://www.intalio.com).
