FUEGOTECH'S FUEGOBPM IS FIRST PRODUCT TO ADHERE TO BPMI.ORG'S BUSINESS PROCESS MODELING LANGUAGE
Platform Delivers and Extends Specification for Business Processes

DALLAS - April 03, 2001 - Fuegotech, an award-winning provider of Business Process Management (BPM) software, today became the first vendor to announce that its product conforms to the Business Process Management Initiative's (BPMI.org) Business Process Modeling Language (BPML) specification.
BPML is a meta-language for the modeling of business processes, just as XML is a meta-language for the modeling of business data. BPML provides an abstracted execution model for online business processes that span multiple applications, corporate departments and business partners, behind the firewall and over the Internet.

The FuegoBPM(TM) platform delivers the functionality defined in the latest release of the BPML specification (BPML Draft 0.4) and additionally incorporates functionality currently proposed for future releases of the specification. Customers can use FuegoBPM(TM) to provide complete business-to-business process integration and management over the Internet. FuegoBPM can also be used for intra-company business integration across multiple applications and corporate departments behind the firewall.

``BPMI.org is a pivotal movement in defining the Business Process Management space,'' said Mark Theilken, CEO of Fuegotech. ``We have always operated ahead of the curve and remain committed to technical initiatives, such as BPML, that will play a significant role as this industry continues to evolve.''

``We're excited that Fuegotech's product supports the BPML specification,'' said Ismael Ghalimi, a founder of BPMI.org. ``This announcement is important because it demonstrates that BPMI.org members can and are making our vision of end-to-end business process integration a reality.''

About Fuegotech, Inc.
Founded in 1999, Fuegotech is a Dallas-based provider of Business Process Management software used to control and synchronize workflow, applications, data and people across one or multiple businesses by generating supervisory applications that represent the business process flow and business rules. Applications are integrated as snap-in components, so customers can expect significantly shorter implementation timeframes than traditional middleware integration approaches and increased revenues from on-the-fly business reconfiguration. With a legacy of 17 years of innovation, Fuegotech is privately held and has offices in Dallas, Buenos Aires, and Mexico City. Visit Fuegotech at www.fuegotech.com.
